## **MarineGuard Satellite Reporting System: Not Just for Boats Ideal for Remote Locations Too**

MarineGuard Network's satellite, alarm-reporting system provides ideal security protection for isolated residential and commercial buildings. Reaching even the most remote areas worldwide, MarineGuard's security-reporting system enables owners to be notified quickly should their alarm system fire. The security signal forwards to a cell phone, Blackberry, pager or computer email. For a higher level of security coverage, the signal can be sent to a professional central station. No longer do owners need to forego security concerns because phone lines or cell coverage is not available in their location, nor do they need to rely on a local alarm and the responsiveness of neighbors for protecting their property.

MarineGuard's satellite reporting system works with MarineGuard security systems or with an owner's existing alarm system. The system features four I/Os that provide valuable information to the police and fire departments when responding to the alarm.

Owners with MarineGuard's satellite reporting system benefit from online access to their monitoring account. This allows them to check the status of their alarm system and remotely arm/disarm the system when needed.

Worldwide satellite reporting system by MarineGuard, a subsidiary of Sure Action Inc., also has GPS tracking capabilities enabling it to provide latitude/longitude, speed and directional information. Perfect solution for securing boats, trailers, trucks, and more!

For additional information, contact a MarineGuard Customer Service Representative at 1 (800) 648-4301, 1 (631) 728-3986 or visit our web site, [www.marineguard.net](http://www.marineguard.net).
